Rating definitions for power solutions

### Standby power

Standby power (3D)

diesel: 50 Hz, 60 Hz; gas: 60 Hz

Prime power for stationary emergency (3E)

diesel: 50 Hz

Data center continuous power (3F)

diesel: 50 Hz, 60 Hz

### Continuous/prime/grid stability power

Continuous power (3A)

diesel: 50 Hz; gas: 50 Hz, 60 Hz

Prime power (3B)

diesel: 50 Hz, 60 Hz; gas: 60 Hz

Grid stability power (3G) – diesel: 50 Hz

### Containerized and enclosed gensets

Enclosures - 50 Hz, 60 Hz, power modules  
50/60 Hz; gas: power modules 50/60 Hz

## PIONEERING THE POWER THAT MATTERS.

Rolls-Royce provides world-class power solutions and complete life-cycle support under our product and solution brand **mtu**. Through digitalization and electrification, we strive to develop drive and power generation solutions that are even cleaner and smarter and thus provide answers to the challenges posed by the rapidly growing societal demands for energy and mobility. We deliver and service comprehensive, powerful and reliable systems, based on both gas and diesel engines, as well as electrified hybrid systems. These clean and technologically-advanced solutions serve our customers in the marine and infrastructure sectors worldwide.

### A solution provider

**mtu** systems power the largest yachts, the strongest tugboats and the biggest land vehicles and provide energy for the world's most important mission-critical applications. Through advanced solutions such as microgrids, we integrate renewable energies and manage the power needs of our customers.

Our customized service offerings help you maximize uptime and performance and are supported by our digital solutions, which enable remote monitoring, predictive maintenance and a range of other benefits that keep your systems running at their best.

For over 110 years, we have provided innovative power solutions for our customers – meeting even the most demanding drive requirements. Our products and services span a wide range of applications and power needs, with both standard and customized options.

### An expert in technology

As part of Rolls-Royce, we have long been known for cutting-edge innovation and technological leadership in product development. That same spirit of innovation inspires our sustainability efforts. Our focus is on developing and implementing system solutions that both maximize efficiency and reduce emissions -- which in turn work to reduce our impact on the environment.

### A passionate and reliable partner

We at Rolls-Royce spend every day working together with our customers, to deliver engines, systems and complete life-cycle solutions that best fit your needs. We understand that each application is different and has its own specific demands. Our engineers embrace the challenge of finding the perfect solution for your unique power requirements. Every step of the way – from project planning, through design, delivery and commissioning; to the lifetime care of your equipment – we are dedicated to helping you get the most from your **mtu** investment.

## FOR POWER SOLUTIONS.

**Standby power****Standby power (3D)**

Standby power applies to installations served by a reliable utility source. The standby ratings are applicable to varying loads for the duration of a power outage.

**Prime power for stationary emergency (3E)**

Prime power for stationary emergency provides classical standby power comparable to the application group standby power (3D). The difference is that this application group offers a 10% overload capability to cover for e.g. voltage variations or peak loads.

**Data center continuous power (3F)**

Data center continuous power is a specific mission critical application. It is especially designed for the use in data centers as emergency standby units. "Data center continuous power" offers an economic and customer friendly solution to comply to the Uptime Institute\* Tier III and Tier IV standards.

**Continuous/Prime/Grid stability power****Continuous + CHP (3A)**

Continuous power applies to installations where one or several generator sets serve as utility. At constant or varying load, the number of generator set operating hours is unlimited. Typical application here is CHP.

**Prime power (3B)**

Prime power applies to installations where utility power is unavailable or unreliable. At varying load, the number of generator set operating hours is unlimited.

**Grid stability power (3G)**

Grid stability power is focused on providing additional short-term power to the grid (peak shaving). This application becomes relevant whenever renewable power sources like solar or wind are used that might not always be able to provide the full power demand for example during peak load times.

## Classification for data center continuous power

## ACCORDING TO THE UPTIME INSTITUTE.

**Tier I**

Tier I is composed of a single path for power and cooling distribution, without redundant components.

**Tier II**

Tier II is composed of a single path for power and cooling distribution, with redundant components.

**Tier III**

Tier III is composed of multiple active power and cooling distribution paths, but only one active path has redundant components and is concurrently maintainable.

**Tier IV**

Tier IV is composed of multiple active power and cooling distribution paths, has redundant components and is fault tolerant.

	Tier I	Tier II	Tier III	Tier IV
Delivery paths	One	One	One active + one passive	Two active
Redundant components	No	Yes	Yes (for active path)	Yes (for two active path)
Simultaneously maintainable	No	No	Yes	Yes
Fault tolerance (single event)	No	No	No	Yes
Compartmentalisation	No	No	No	Yes
Suitable <i>mtu</i> power generation application	Standby power (3D) Prime power for stationary emergency (3E) Prime power (3B) Grid stability power (3G)		Data center continuous power (3F) Continuous power (3A)

**50Hz – Power available up to:**

Standard:

Site altitude above sea level: 400 m  
Intake air temperature: 40°C

NOx emission optimized:

Site altitude above sea level: 100 m  
Intake air temperature: 25°C

NEA Singapore:

Site altitude above sea level: 100 m  
Intake air temperature: 40°C

**60Hz – Power available up to:**

Standard:

Site altitude above sea level: 400 m  
Intake air temperature: 25°C

**Available power for battery storage solutions:**

Standard:

Site altitude above sea level: 2000 m  
Ambient temperature: -20°C to 40°C

C/F: Consult factory

D: Lambda = 1 with 2-way-catalyst

L: Leanburn with single stage intercooling

Z: Leanburn with two stage intercooling
